

One intelligent system around the Relationship Manager

Microsoft Data · Azure · Microsoft 365 · Agent 365 · Fabric IQ

A governed, human-controlled day in the life of John Doe

FRONTIER RM

Agenda

Five acts: business proof first, then the Microsoft platform that makes it possible.

01

RM DAY

A governed day in the life

02

DATA + AZURE

Unified, open, AI-ready data

03

M365 + AGENT 365

Work context and agent control

04

FABRIC IQ

Shared business meaning

05

CLOSE

Outcomes and next steps

A day in the life of John Doe

Begin with the client and the RM workflow. Technology follows the work.

The RM spends the day assembling context

Signals exist across systems, but connecting them still falls to the relationship manager.

01

Find context

Accounts, holdings, profile, consent, interactions.

02

Interpret need

Events, objectives, liquidity, risk, market context.

03

Prepare

Correspondence, guidance, talk track, checks.

04

Follow up

Client email, CRM draft, evidence trail.

The moments that matter

A working day moves from signal to governed follow-up.

John remains accountable at every transition.

Start with the Guided Story

A 60-second executive promise before the working cockpit.

IMAGE PLACEHOLDER · GUIDED STORY

Insert the opening scene or a montage of the seven scenes.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

LIVE HANDOFF

Seven scenes

The day begins · sources converge · Client 360 · briefing · recommendations · draft · impact.

CONTROL

Presenter-ready

Auto progression, pause, direct scene navigation, and deterministic rehearsal fallback.

Today: priorities become a working plan

Portfolio signals, report-style metrics, workflow cards, and action progress share one data contract.

IMAGE PLACEHOLDER · TODAY

Insert Today with morning pulse, metrics, workflow cards, and day plan.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

OUTCOME

Actionable, not decorative

Metrics drill into clients and actions.
Completing work updates session state and coverage.

Client 360: governed context before conversation

Daniel's relationship, consent, timeline, profile, and activity evidence in one decision surface.

IMAGE PLACEHOLDER · CLIENT 360

Insert Daniel Lim Client 360 with risk and activity evidence visible.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

CONTROL

Declared ≠ observed

Observed activity is review evidence. The client-confirmed profile remains controlled.

Three artifacts, one governed progression

Each stage produces something John can inspect, challenge, and improve.

- Evidence and required checks travel with every artifact
- Later stages unlock only after earlier context exists
- John edits and approves; the system never executes

Same model. Different grounding.

The Opportunity Studio makes the value of Fabric IQ directly observable.

IMAGE PLACEHOLDER · WITHOUT FABRIC IQ

Insert the General AI draft with no enterprise citations.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

IMAGE PLACEHOLDER · WITH FABRIC IQ

Insert the Fabric IQ grounded artifact with evidence and controls.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

gpt-4.1-mini · managed identity in both modes

Sources and Frontier Copilot

Client voice and approved knowledge remain available across the workflow.

IMAGE PLACEHOLDER · SOURCES

Insert an authored Daniel email or advisory document.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

IMAGE PLACEHOLDER · FRONTIER COPILOT

Insert the persistent Copilot panel with a cited answer.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

CIO Houseview meets client evidence and controls

The active 19 August 2026 market view is tailored without collapsing research, risk, activity, and controls.

IMAGE PLACEHOLDER · CIO HOUSEVIEW

Insert the report reader and selected-client advisory panel.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

BOUNDARY

Compliance-aware

Retained and suppressed fictional candidates remain explainable. No automatic suitability conclusion.

Transparent multi-agent operations

Service health, synthetic telemetry, and captured agent replay remain visibly distinct.

IMAGE PLACEHOLDER · OPERATIONS

Insert connected services, run selector, agent fleet, event stream, and outcome.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

TRUTH STATES

Live ≠ synthetic ≠ replay

Health is deployed state. Motion is demo telemetry. Events are a selected captured run.

From application navigation to client judgement

The system returns attention to the work only the RM can do.

BEFORE

Assemble the picture

Search context · reconcile signals · draft from blank · document provenance manually.

WITH FRONTIER RM

Start from evidence

Priorities sequenced · context connected · artifacts prepared · judgement retained.

From fragmented data to an intelligent data estate

Microsoft Data and Azure provide the operational, analytical, and AI-ready foundation.

The Microsoft data-to-AI capability landscape

Operational data, analytics, governance, AI, and work experiences form one connected system.

WORK + ACTION

Microsoft 365 · Dynamics 365 · Power BI · custom applications

AI + AGENTS

Azure AI · Microsoft Foundry · Copilot Studio · Agent 365

ANALYTICS + IQ

Microsoft Fabric · Power BI · Real-Time Intelligence · Fabric IQ

OPERATIONAL DATA

Azure SQL · PostgreSQL · Cosmos DB · Event Hubs · open ecosystems

SECURITY + GOVERNANCE

Microsoft Entra · Purview · Defender · policy and lineage

Azure data services: operational, open, and real-time

Choose the right engine while keeping governance, identity, and AI readiness consistent.

TRANSACTIONAL

Operational data

Azure SQL · PostgreSQL · Cosmos DB for cloud-native and mission-critical applications.

STREAMING

Real-time data

Event Hubs and streaming patterns bring signals into operational analytics.

OPEN

Lake and ecosystem

Storage, open formats, shortcuts, and interoperability with partner engines.

Microsoft Fabric: unified analytics SaaS

A complete data platform with shared experiences, governance, Copilot, and OneLake.

Data Factory

Data Engineering

Data Science

Data Warehouse

Real-Time Intelligence

Power BI

Fabric IQ

ONE LAKE · ONE SECURITY MODEL · ONE SAAS EXPERIENCE

OneLake: one logical data lake for the organization

Open formats and shortcuts reduce unnecessary copies while preserving domain ownership.

- One logical data lake across Fabric
- Open table formats and interoperable engines
- Domain organization, discovery, lineage, and security

Frontier data foundation: Bronze, Silver, Gold

A schema-enabled Lakehouse turns deterministic source data into governed RM context.

IMAGE PLACEHOLDER · FABRIC WORKSPACE

Insert workspace, Lakehouse, medallion notebook, or tables.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

- 01

21 Bronze
Source-aligned landing tables
- 02

21 Silver
Validated, deduplicated domain data
- 03

12 Gold
RM-ready business context

20 fictional clients · 399 rows

Power BI and Direct Lake: business meaning at data speed

Curated measures and relationships ground analytics and AI in trusted business concepts.

IMAGE PLACEHOLDER · SEMANTIC MODEL / POWER BI

Insert model diagram, DAX validation, or Power BI view.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

DIRECT LAKE

12 tables · 11 measures

Shared business definitions and relationships without duplicating imported data.

AUTHORITY

Validated DAX

Authoritative monetary values and hidden identifiers stay governed.

From data platform to business workflow

Data becomes valuable when trusted meaning reaches people, applications, and agents.

Bring intelligence into the flow of work. Govern agents as a workforce.

Microsoft 365 supplies work context; Agent 365 provides the enterprise control-plane pattern.

Microsoft 365: where client work happens

Communication, content, meetings, collaboration, and Copilot form the everyday work surface.

COMMUNICATE

Outlook + Teams

Client conversations, meetings, calls, and follow-up.

KNOWLEDGE

SharePoint + files

Authoritative documents, versions, permissions, and collaboration.

ASSIST

Microsoft 365 Copilot

Work-aware assistance across people, content, activity, and workflows.

Work context is continuous, evolving, and connected

Snapshots miss the sequence of conversations, content, people, and changing priorities.

Work IQ connects context across the flow of work.

Microsoft 365 patterns in the RM journey

Client voice and collaboration can enrich governed data while preserving permissions and provenance.

IMAGE PLACEHOLDER · OUTLOOK / SHAREPOINT

Insert M365 source or work-context screenshot.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

IMAGE PLACEHOLDER · TEAMS / COPILOT

Insert Teams bot or Copilot delivery screenshot.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

Agent 365: a control plane for enterprise agents

Know every agent, control access and actions, and operate the agent estate through its lifecycle.

IDENTITY

Know every agent

Unique identity, ownership, purpose, and trust posture.

CONTROL

Govern access + action

Least privilege, policy, data scope, tools, and approval.

OPERATE

Observe the lifecycle

Inventory, health, evaluation, incidents, versions, and retirement.

Know every agent: identity and registry

An enterprise agent estate needs ownership and discovery before it can be governed.

IMAGE PLACEHOLDER · AGENT 365 REGISTRY

Insert registered-agent inventory or identity screenshot.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

STATUS

Evidence pending

Do not mark Agent 365 registration as verified until supporting details are supplied.

Control what agents can access and do

Agent identity is useful only when paired with least privilege, policy, and human approval.

- Separate read, draft, and execute permissions
- Preserve source-level authorization and provenance
- Require explicit approval for consequential actions

Operate agents with observability and lifecycle controls

Health, evaluations, versions, incidents, and retirement turn individual agents into a managed estate.

IMAGE PLACEHOLDER · AGENT 365 OPERATIONS

Insert observability, evaluation, lifecycle, or incident view.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

LIFECYCLE

**Build → evaluate → deploy → observe →
improve → retire**

Use explicit owners, versions, policies, and evidence throughout.

Frontier agent estate mapped to Agent 365

A transparent inventory makes the target registration and governance work concrete.

RM Orchestrator v2	FOUNDRY / AZURE · DEPLOYED	AGENT 365 · EVIDENCE PENDING
Customer Intelligence v3	FOUNDRY / AZURE · DEPLOYED	AGENT 365 · EVIDENCE PENDING
Market Context v2	FOUNDRY / AZURE · DEPLOYED	AGENT 365 · EVIDENCE PENDING
Meeting Preparation v2	FOUNDRY / AZURE · DEPLOYED	AGENT 365 · EVIDENCE PENDING
Fabric Data Agent	FABRIC · DEPLOYED	AGENT 365 · EVIDENCE PENDING
Teams delivery	FOUNDRY / AZURE · DEPLOYED	AGENT 365 · EVIDENCE PENDING

From unified data to shared business meaning

Fabric IQ gives people and AI a connected language for the state of the business.

What Fabric IQ adds

A semantic foundation that connects data, models, rules, relationships, and actions.

MEANING

Unify semantics

Shared definitions across data, models, rules, and actions.

CONTEXT

Understand relationships

Reason over business entities and what connects them.

GROUNDING

Power people + AI

Give analytics, Copilot, and agents consistent business context.

Ontology: model the business, not just the tables

Business entities, relationships, and rules extend trusted semantics into connected intelligence.

IMAGE PLACEHOLDER · FABRIC IQ ONTOLOGY

Insert deployed definition, entity map, or graph view.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

DEPLOYED DEFINITION

15 entities · 13 relationships · 15 bindings

Definition readback is validated. Live graph traversal is not claimed.

The IQ value chain: data → meaning → context → action

Connected intelligence is a sequence of governed contracts, not one opaque model.

Fabric IQ in the RM workflow

The same model becomes more tailored and explainable when grounded in governed enterprise context.

WITHOUT IQ

General AI draft

Basic client facts · generic framing · mandatory safety checks · no enterprise citations.

WITH FABRIC IQ

Governed RM artifact

Client 360 · sources · Houseview · activity · relationships · controls · provenance.

Same gpt-4.1-mini deployment · different context envelope

Fabric Data Agent, Foundry, and Agent 365

Governed retrieval, specialist orchestration, enterprise control, and human review are distinct responsibilities.

IMAGE PLACEHOLDER - DATA AGENT / FOUNDRY / AGENT 365

Insert Fabric Data Agent, Foundry project, or verified Agent 365 evidence.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

- 01

Data Agent
Governed semantic retrieval
- 02

Foundry agents
Specialist orchestration
- 03

Agent 365
Control plane · evidence pending
- 04

RM review
Human accountability

End-to-end reference architecture and governance

The deployed system keeps evidence, identity, controls, and human accountability visible.

IMAGE PLACEHOLDER · REFERENCE ARCHITECTURE

Optionally replace with your detailed architecture screenshot.

Replace this zone with your screenshot; retain the slide title and adjacent callouts.

05RM cockpit

- Managed identity and scoped tools
- Stable source IDs and deterministic gates
- Public rationale and human approval
- Agent 365: evidence pending

Three takeaways and a practical next step

Turn platform capability into repeatable, governed RM outcomes.

01

Unify the data foundation

Operational and analytical data becomes open, governed, and AI-ready with Azure and Fabric.

02

Connect work and agents

Microsoft 365 brings work context; Agent 365 provides the target control-plane pattern.

03

Share business meaning

Fabric IQ grounds people, analytics, and agents in consistent context and provenance.

NEXT: prioritize production connections, Agent 365 evidence, and the next RM journeys.

THE QUESTION WE STARTED WITH

What changes when the bank works as one intelligent system?

Evidence arrives before the question. Artifacts arrive before the blank page. Human judgement remains in control.
